

Myles J Sartor

Cody Buntain

INST414-0101

28 November 2025

Semester Project - 1 - Topic and Group Selection

1. I'm choosing to work in a group by myself. My name is Myles Sartor.
2. I will be extending my module 6 medium post that utilizes supervised learning to predict song genres accurately, precisely, and with a level of recall that is reasonable for each record (<https://medium.com/inst414-data-science-tech/predicting-music-genres-with-supervised-learning-what-audio-and-lyrical-features-reveal-about-cdc048bfc86b?postPublishedType=repub>).
3. I will be utilizing the supervised learning and evaluation modules to build a more coherent project for the same group of stakeholders that I was originally working with. In doing this, I will be extending and revising different machine-learning principles accordingly (Classification methods and visual insights).
